Citations and explanations (Rule 70.7)

This opinion is based on the set of amended claims filed on 30-01-2006.

Present claims 1-3 relate to a syringe of a non-reusable type.

Documents cited in the International Search Report:

D1: US 4883466 A

D2: US 6013056 A

D3: US 5000735 A

D4: SE 469263 B

D5: SE 469742 B

The document D5 is regarded as being the closest prior art to the subject-matter of claim 1. D5 discloses a syringe of a non-reusable type. Means (6) are provided for coupling and uncoupling a piston (4) and a rod (5) and adopt a coupled state when the piston is drawn by the rod from a position near the needle to one remote from the needle, and are brought to the uncoupled state when the piston is pressed by the rod towards the needle. The means comprise support and/or slide surfaces (5k',5k) on the rod and facing the needle, and working in conjunction with support and/or slide surfaces (4k',4k) on the piston. The piston first support and/or slide surfaces (4k') nearest the needle (3) are arranged to tilt so that with the rod (5) displacement movement towards the needle (3), a rotary movement around a container centre line is imparted to the piston (4).

The subject-matter of claim 1 therefore differs from this

PCT/SE2005/000420

Box No. VII Certain defects in the international application

The following defects in the form or contents of the international application have been noted:

This opinion is based on the set of amended claims filed on 30-01-2006.

According to the requirements of Rule 11.13(m) PCT, the same feature shall be denoted by the same reference sign throughout the application. This requirement is not met in view of the use of (10a), (see claim 1, line 17, and claim 2, line 1). This requirement is not met in view of the use of (12) and (12') in claim 1.

International application No.

PCT/SE2005/000420

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

This opinion is based on the set of amended claims filed on 30-01-2006.

Claim 1 is not as clear and concise as is called for in PCT Article 6. One of the reasons for this is that "said means (10)" in the characterizing portion has not been previously defined.

Form PCT/IPEA/409 (Box No. VIII) (April 2005)

International application No.

PCT/SE2005/000420

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.

Continuation of: Box No. I, item 4

The amendments filed with the letter dated 23-03-2006 introduce subject-matter which extends beyond the content of the application as filed, contrary to Article 34(2)(b) PCT. The amendments concerned in claim 1 are the following:

- "Sliding surface" (13c,13d); (cf. "support surface" in the application as filed).
- "Outer part" (12'); (cf. "piston" in the application as filed).
- "Inner part" (10); (cf. "means" in the application as filed).
- "Central portion" (10a); (cf. "sub portion" in the application as filed).
- "Outer surface" (10b); (cf. "sliding surface" in the application as filed).

Claims 2 and 3 are dependent on claim 1 and are therefore also considered to be amended. Consequently, the amended claims 1-3 are not considered to be fully supported by the application as filed. Therefore, this report has been established as if the amendments had not been made; see PCT Rule 70.2 (c).

International application No.

PCT/SE2005/000420

Supplemental Box

in case the space in any of the preceding boxes is not sufficient.

Continuation of: Box V

known syringe in that the support and slide surfaces are given another design and also in that the piston possesses means such that it is rotatably connected to one of the coupling devices. The subject-matter of claim 1 is therefore novel (Article 33(2) PCT).

The problem to be solved by the present invention may therefore be regarded as to provide a syringe of a different design. The solution to this problem proposed in claim 1 of the present application is considered as involving an inventive step (Article 33(3) PCT) for the following reasons: the combination of the sliding surfaces and the rotatable part that connects the second coupling device with the piston makes it possible to offer sliding surfaces with less friction.

Claims 2 and 3 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.
